

IMPORTANT

Read This Before You Install

Requirements:

- Trilian v1.4 or higher already installed
- Omnisphere version 2.0 or higher

Compatibility:

- Do NOT install this update UNLESS you own Trilian and are using Omnisphere v2 or higher
- The Trilian software and library is REQUIRED to be installed on your system to use this Patch Library

Trilian Patch Library 1.4.5 "Omni2 Update":

- Tagged and Reorganized all patches for Omnisphere 2 compatibility
- Includes needed data for Trilian to appear inside Omnisphere 2

Instructions:

The installer you downloaded comes with three folders:

Mac
STEAM
Windows

- OSX users: Open the Mac folder to find the installer .pkg to run.
- PC users: Open the Windows folder to find the installer .exe to run.

Please run the installer directly from within the folder and do not change the folder hierarchy. The installers rely on the folder hierarchy presented in the download to function properly. It is not necessary to open the STEAM folder.

NOTE: Please do NOT try to manually install the STEAM folder.

The installer automatically checks the Spectrasonics folder on your startup drive to determine the STEAM folder location. The Upgrade will then be installed to the STEAM folder.
